About Me

SQA Engineer with 6+ years of experience testing web and mobile applications across supply chain and healthcare domains. Strong expertise in functional, regression, and API testing using Postman and Jira in Agile Scrum environments. Proven experience as a Release Owner, handling production issues and ensuring stable, high-quality releases through end-to-end QA ownership.

Skills

Automation & API Testing

- Selenium (Java), Playwright (JS), TestNG
- REST Assured, Postman

Tools & Platforms

- Jira (Defect & Test Management), Jenkins (CI/CD), Git
- Kubernetes (kubectrl)
- Grafana, Kibana, Jaeger, Full Story

Cloud

- AWS (Cognito, S3, SQS, IAM)

Messaging & Event Streaming

- Message Brokers (Kafka / RabbitMQ / AWS SQS)
- Queue-based testing, Event validation

Testing Types

- Functional, Regression, Integration, Smoke & Sanity Testing
- API Testing (Postman)
- Manual Testing (Web & Mobile)
- Performance Testing (JMeter)

Databases

- MongoDB
- MySQL

Methodologies

- Agile (Scrum), STLC, SDLC
- Sprint Planning, Daily Stand-ups, Reviews, Retrospectives,
- Release Validation & Sign-off, Change Impact Analysis

Professional Experience

Logward Systems Private Limited | QA Engineer II

May 2023– Present

(Supply Chain Web Application)

- Owned end-to-end functional, system, and regression testing for a large-scale supply chain web application deployed on Kubernetes, ensuring high reliability across releases
- Demonstrated strong understanding of Supply Chain Management (SCM) concepts including order lifecycle, shipment tracking, inventory flow, and logistics workflows
- Designed and developed a scalable API automation framework using REST Assured (Java) with TestNG, enabling reusable and data-driven testing
- Planned and executed API testing using Postman and automated suites, validating complex business workflows and service integrations
- Authored and led peer reviews of test cases, ensuring requirement traceability with BRDs and tracking execution and defects using Jira
- Validated CI/CD pipelines (Jenkins), performing post-deployment smoke and sanity testing across environments
- Tested cloud-integrated workflows involving AWS services (Cognito authentication, S3 uploads, SQS message processing)
- Monitored application behavior using Grafana, Kibana, and Jaeger, contributing to effective root cause analysis and faster issue resolution
- Used FullStory to analyze user sessions and reproduce customer-reported production issues
- Acted as Release Owner, driving QA sign-off and ensuring release readiness across environments

DocEngage Informatics Pvt Ltd | QA Engineer

Jan 2022 – May 2023

Products:

- EHR (Electronic Health Records) – Web & Mobile Application
- HCRM (Healthcare CRM) – Web & Mobile Application

Domain: Healthcare

- Performed functional, integration, regression, smoke, and sanity testing for EHR and HCRM web and mobile applications
- Authored, reviewed, and executed test cases mapped to business and functional requirements, ensuring complete coverage
- Planned and executed API testing using Postman, validating integrations and data flow across healthcare systems
- Logged, tracked, and verified defects using Jira, working closely with developers to ensure timely resolution
- Tested applications across multiple browsers and mobile platforms, ensuring cross-platform compatibility
- Contributed to release testing and validation, supporting smooth deployments and stable production releases

TrackNerd Gps Pvt Ltd | Test Engineer

Feb 2020 - Jan 2022

Products:

- Vehicle Monitoring System – GPS-based tracking web application
- Fuel Monitoring System – Fuel usage & analytics tracking web application

Domain: Fleet & GPS Tracking

- Performed end-to-end manual testing for GPS-based tracking applications, validating vehicle movement, fuel consumption, alerts, and reports
- Authored and executed test cases based on business and functional requirements for both Vehicle and Fuel Monitoring systems
- Conducted functional, integration, regression, and smoke testing, ensuring accuracy of real-time tracking and analytics data
- Validated API data flow between tracking devices and backend systems to ensure correct data ingestion and reporting
- Logged, tracked, and verified defects, collaborating closely with developers to ensure timely resolution
- Supported client onboarding and production issue validation, reproducing and verifying customer-reported tracking issues

Education Background

B.Tech in Computer Science and Engineering

Delhi Institute of Engineering and Technology, Meerut

Soft Skills

- Strong analytical and problem-solving skills
- Effective defect triaging and prioritization
- Clear communication with cross-functional teams
- Ownership and accountability for releases
- Attention to detail and quality mindset
- Ability to work in fast-paced Agile environments

Training and certifications

- **Core Java**, Swastika Institute of Technology, Meerut, 2020
- **Cyber Security & Ethical Hacking**, Delhi Technological University, Delhi, 2020

Spoken Languages

- Hindi
- English
