About Me

As a dedicated QA Engineer, I ensure high-quality software products through attention to detail, quick learning, and strong communication skills. I excel in collaborative team environments and have a natural talent for problem-solving. With strong time-management skills, I prioritize tasks and meet deadlines without compromising on quality.

Areas Of Expertise

- Software Development Lifecycle
- Software Testing Lifecycle
- Project Management
- Functional Testing
- Integration Testing
- Regression Testing
- API Testing
- Performance Testing
- Sanity & Smoke testing
- Adhoc testing
- Bug & Defect Lifecycle Management
- QA Methodologies
- Manual Testing
- Requirements Gathering & Analysis
- Stakeholder Management
- Technical Documentation
- Functional Testing
- Agile (SCRUM) Methodologies
- Database Management
- Expert in debugging the issue

Technical Forte

Software Testing: Manual Testing(Web App Testing,Mobile App Testing), Automation Testing FE and API
Automation Testing (Selenium,Rest Assured,TestNG)
Testing Tools: Fireflink, Postman, and Salesforce
Testing Management Tools: Jira, Jenkins, Rancher, Jaeger, AWS, Salesforce, ,TestNG
Monitoring Tools : Fullstory,Grafana,Kibana,kubectI,Papertrail, Rollbar,Freshping
Database: Mongo,Mysql
Languages : Java,HTML,CSS,C
Customer Engagement Tools : Freshdesk

Professional Experience

Logward Systems Private Limited | QA Engineer II

May 2023– Present

Project #1: Supply Chain Managment

Application Type: Web-based

Tools: Jira, Jenkins, Rancher, Jaeger, AWS, Salesforce, Fullstory,postman,Grafana,Kibana,Kubernetes, GitHub

Database: Mongo,Mysql

Key responsibilities:

- Played a vital role in the Functional Testing of the product.
- Involved in Sprint discussions and Collaborating with developers and business stakeholders to understand and analyze the Business Requirement Documents(BRDs) and functionalities
- Executing test cases and assessing and updating test results to the teams
- Collaborating with developers and other stakeholders to identify and resolve the issues.
- Pivotal role involvement in functional, system, and regression testing operations as well as performing API testing of the product using Postman
- Carrying out a wide range of activities, including defect tracking, regression testing, verifying fixes, reporting bugs, and final product validation
- Ensuring the products adhere to the business requirements and software quality standards by translating business requirements into test cases
- Delivering high-quality features to customers by working with cross-functional teams across the software development lifecycle
- Keeping track of and providing to all stakeholders QA indicators such as coverage, quality, performance, and test case effectiveness
- Worked as the release owner, ensuring that all test cases have been executed by the team and provided sign-off with complete test cases, bug-free, and ready for product release.
- Proactively checked and addressed on-call customer issues, debugged and resolved the issues, ensuring customer satisfaction and product reliability.
- Demonstrated expertise in debugging all production exceptions, swiftly identifying and resolving issues to maintain product stability and performance.
- Performed daily sanity checks to ensure that all product features are working as expected, maintaining product reliability and functionality on a day-to-day basis.
- Acted as a feature owner for Data Management, AutoTracking, User Management, Trigger, and Sidebar, ensuring their development, testing, and functionality.

Key responsibilities:

- Analyzing and gathering the requirements from the user
- Developing and implementing testing strategies and plans.
- Identifying and documenting defects and issues in software products.
- Responsible for writing and reviewing the Functional Requirements Document (FRD).
- Creating and executing test cases to ensure quality of product.
- Collaborating with developers and other stakeholders to identify and resolve issues.
- Reporting test results to project managers
- Handling the product release management, including the documentation of the Requirements Traceability Matrix (RTM) and Release notes.
- Reviewing the API documentation, understand the APIs and services they provide, and test them with appropriate test data using tools such as Postman
- Responsible for the Mobile Application Testing
- Providing input into product design and development to ensure testability.
- Utilize my analytical skills to understand customer requirements and provide solutions within the same product.
- Responsible for providing technical support and product training to customers
- Mentoring and coaching junior QA team members.

Project #1: **EHR(Electronic Healthcare Record)**

Role: **QA Engineer**

Domain Name: **Healthcare**

Team Size: **5**

Tools used: **JIRA, Postman**

Project Description:

DocEngage EHR is cloud based web & mobile application which provides end to end solution for clinics or hospitals to manage the patient records like vitals, prescription, invoices and appointment management, stock management in pharmacy for OPD & IPD patients

Roles and responsibilities:

- Review Product Requirement Documents, and involved in developing test cases in QC.
- Involved in performing Smoke, GUI, Functional, Integration and Regression Testing.
- Tested this application on different OS and Browser matrix.
- Reported defects in a timely manner and logged the same into defect tracking tool – JIRA.
- Planned & Tested all API integrations using Postman tool.
- Verified the Fixed bugs and tracked the same to closure.
- Verified different API's as per the expected behavior and prepared the reports.
- Participate in the meetings, prepared reports and other supportive documentation as per the customer.

Project #2:**HCRM (Healthcare CRM)**

Domain: **Healthcare**

Role: **QA Engineer**

Team Size: **6**

Tools used: **JIRA, Postman.**

Project Description:

DocEngage HCRM app is cloud based web & mobile application which is used for lead management and builds strong relationships between the customer and improves revenue rates based on the customer data coming from different interaction channels like phone calls, website, social media, etc

Roles and responsibilities:

- Review Product Requirement Documents, and involved in developing test cases in QC.
- Involved in performing Smoke, GUI, Functional, Integration and Regression Testing.
- Planned & Tested all API integrations using Postman tool.
- Verified different API's as per the expected behavior and prepared the reports.
- Identified the defects and logged the same into defect tracking tool - JIRA.
- Interacted with Software Developers for bug reviews and participated in QA meetings.
- Verifying the Fixed bugs and tracking the same to closure.
- Review in Test cases to ensure coverage of requirements.

Key responsibilities:

- responsible for performing manual testing on the tracking application to ensure its quality and functionality.
- Develop test plans and test cases based on software requirements and design specifications
- Conduct functional, integration, regression, and smoke testing on CRM Web Applications
- Report and track defects and issues found during testing
- Communicate test results and recommendations to project managers
- Interacting with the Client to gather requirements and issues
- Responsibility to assist clients in resolving technical issues by providing effective solutions that meet their needs and ensure their satisfaction.
- Performing end-to-end testing of the API to ensure that it meets functional requirements, quality standards, and performance criteria.
- Responsible for effectively onboarding and training new clients to ensure a positive experience with our company's products and services.

Education Background

- Delhi Institute of Engineering and Technology -Meerut
B.Tech -Computer Science and Engineering Completed in **2020**
- Shri Gandhi Inter College khadda Kushinagar- Uttar Pradesh
Intermediate - Math Completed in **2016**
- Shri Gandhi Inter College khadda Kushinagar- Uttar Pradesh
High School - Science Completed in **2014**

Soft Skill
